Cover: This complex two-span prestressed girder over the Boulder River and a frontage road was built in 1982 as part of the Interstate 15 project near Basin, Montana. Designed so that the substructure would not encroach on the streambed, the end abutments are founded on steel bearing piles which extend through reinforced earth embankments. Due to the substantial curve and freezing concerns, five feet of fill was placed over the beams making the roadway continuous over the structure.

F O R E W O R D

This publication lists all major and minor structures on the Federal-Aid Interstate, Primary, Secondary and Urban Systems. It also lists structures on Non-Federal-Aid roads which the Department of Highways maintain. A major structure is a bridge that is greater than twenty feet in length measured from face to face of abutment.

BRIDGE Number:

System: I - Interstate; P - Primary; S - Secondary; U - Urban;
 L - Local (Coincident structures over F.A. Systems and
 State Maintained off-systems structures);
 M - Municipal (Coincident and other State Maintained
 off-systems structures in incorporated
 cities);
 R - Railroads (Coincident structures over highways);
 Route Number: Unique for each route inventoried.
 Milepoint: In thousandths of a mile.
 Sequence: Number of references made to the milepoint.

REMARKS:

A - Adjacent opening of preceeding underpass.
 C - Coincident route using same structure.
 D - Indicates a dam.
 F - Indicates a ford.
 L - Opposite traffic lane or lanes of closed median structures.
 P - Parallel or dual structures.
 R - Structure serving section direction traffic only.
 S - Structure serving opposing traffic only.
 T - Temporary structure.
 U - Underpass.

COINCIDENT KEY: Indicates the file number for structures coincident to (above) Federal Aid routes or State maintained routes.

SIGNED ROUTE NO: I - Interstate route marker; U.S. - United States route marker; S - State route marker;
 Other Route - number only printed.

AVERAGE DAILY
TRAFFIC:

Traffic Counts for 1985.

INVENTORY RATING: This capacity rating, for the vehicle type used in the rating, is the load level which can safely utilize an existing structure for an indefinite period of time.

OPERATING RATING: This capacity rating is the absolute maximum permissible load level to which the structure may be subjected for the vehicle type used in the rating.

Codes - The first digit shows the type of loading.

1 - H(truck)	4 - Type 3(3 axle truck)	7 - Railroad
2 - HS(truck)	5 - Type 3S2 (semi-tr)	8 - Pedestrian or Special
3 - Alternate Interstate	6 - Type 3-3 (trailer)	9 - Gross load only

The second and third digits show the gross loading in tons.

NAME OF FEATURE
CROSSED:

Full name or may be abbreviated. An asterisk indicates a structure on a designated defense highway considered to be a critical facility. As defined in FHPM Volume 6, Chapter 10, Section 2.

APPROXIMATE
LOCATION:

Narrative description of the bridge location described from a distinguishable feature on the route on the Official Montana Highway Map.
